

Secondary Market Update: SBA 7(a) Loans

April 2019

Benjamin M. Clark Senior Vice President GGL Trading

Today's Agenda

Originating and Selling SBA 7(a) Loans

- Introduction to the secondary market
 - To Hold or to Sell...
 - What drives premium levels?
- Role of the Lender, Dealer & FTA
- Recent pricing trends
- Sample Pricing
- Gain on Sale Accounting (ASC 860)

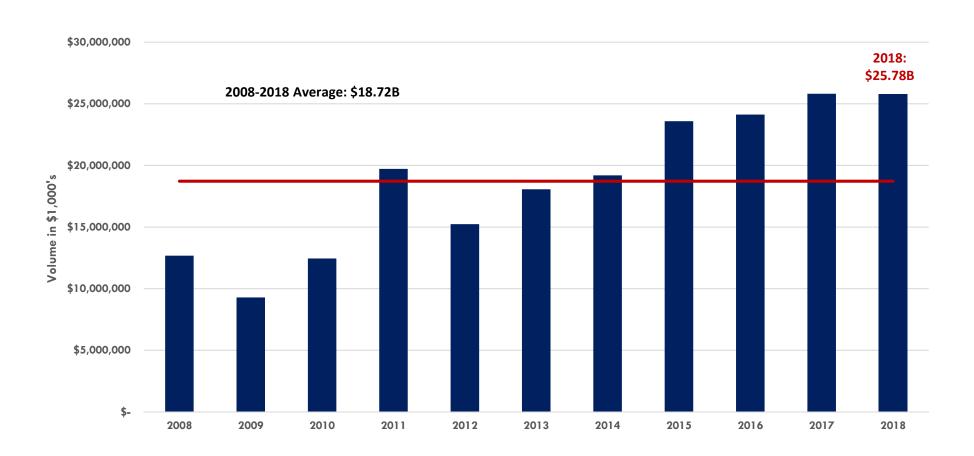

Introduction to the Secondary Market

Annual Gross SBA 7(a) Loan Approvals

(Note SBA Fiscal Year of Oct. 1 – Sep. 30)

SBA 7(a) Secondary Market

- The guaranteed portions of SBA 7(a) loans are traded on an established secondary market
- Loans are either "bundled" with other similar loans and securitized into 7(a) pools or sold individually to an investor
- Investor base is primarily other regulated depository institutions in need of high quality assets
- Several regional Broker/Dealers involved to facilitate the transfer
- Guaranteed portions typically trade at a considerable premium

Hold or Sell?

Hold

- Earn full rate on entire loan balance over life of the loan
- Capital and lending capacity tied up in the principal portion of guaranteed piece

Sell

- Generate liquidity re-lend those dollars in community
- Upfront income (premium)
- Earn a servicing fee on the guaranteed portion
- Give up long-term earnings for up-front income

Why Sell to the Secondary Market?

- Win business in competitive projects
- Immediate liquidity
 - Leverage your lending capacity
- Increased earnings
 - Servicing Income
 - Premium income

Servicing Income

- SBA requires lender to hold at least 1% for loans sold at a premium
 - Can hold less if sold at par or a discount
- Collected during the life of the loan
 - Collected on guaranteed portion sold
- Retain for on-going guarantee fee
- Smaller servicing fee greater premium
- Larger servicing fee smaller premium

Premium Income

- One time source of income
 - Collected at time of loan sale
 - Can be anywhere from 1% to over 15%, depending on note terms

Note: Review ASC 860 for accounting guidance on the sale of financial assets

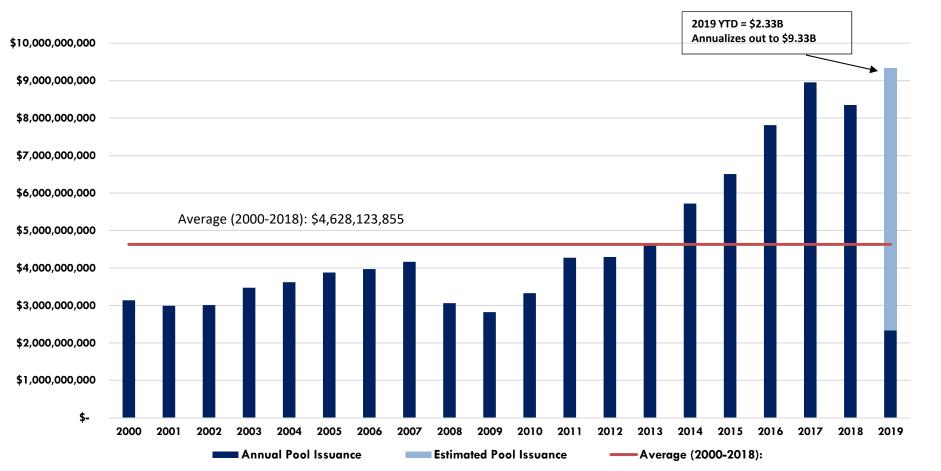

Premium Drivers

- Pool eligible structures command highest premium
 - Brand new!
 - Calendar quarterly adj
 - Indexed to prime
 - 10yr or 25yr maturity
 - Longer maturities and higher coupons command higher premiums
- Loans under \$2MM in size more liquid
- HOWEVER... A very active market exists for nonpool eligible loans (1yr, 3yr, 5yr, fixed rates, etc.)

Total SBA 7(a) Pool Issuance by Year

11

 Pools are categorized into "WAM Buckets" based on the underlying loan term and collateral type:

| | All Issuance | 2018 | | | |
|--------------|--------------|------------|--|--|--|
| WAM Bucket | % of Total | % of Total | | | |
| <8 | 5.91% | 0.762% | | | |
| 8 to 11 | 30.30% | 41.87% | | | |
| 11 to 16 | 4.60% | 2.89% | | | |
| 16 to 21 | 4.68% | 2.22% | | | |
| 21+ | 54.51% | 52.26% | | | |
| | | | | | |
| 8-11 and 21+ | 84.81% | 94.13% | | | |

The pool production among differing WAM buckets will vary from year to year. A vast majority of pool issuance each year will fall in either the 21+ year or the 8-11 year WAM buckets. These two WAM buckets represent 85% of all pools issued since program inception and 94% of recent issuance.

What Loans Can Be Sold?

- SBA 7(a) program loans
 - Standard 7(a)
 - SBA Veteran Advantage
 - International Trade
 - SBAExpress Loans
- Use of Proceeds*
 - Working Capital
 - Equipment
 - Real Estate

*Cannot sell revolving credit lines

Bid Sheet

- SBA GP Number
- Loan Guaranteed Balance
- Gross Coupon
- Net Coupon
- Fixed or adjustable rate
- Payment frequency

- Coupon adjustment frequency
- Prepayment Penalty
- Original dated date of loan
- Maturity date of loan
- Caps/Floors

Bid Process & Good Delivery

- Loan bids are typically only executable the moment they are conveyed
- Bidder should communicate the nature of the bid
 - Indication or Market Bid
 - Expiration/Lock Period
 - Assumptions being made
- Once a price is agreed upon, seller and buyer are contractually obligated to sell and buy the loan at that level
- Price typically "locked" for 30-45 days for Good Delivery Process
- "Good Delivery" is the receipt of all documents in good order and ready for settlement
 - Loan terms agree with those known at the time of bid
 - Loan fully disbursed and current
 - All official transfer documents completed correctly

Role of the Lender, Dealer, and FTA

The Role of the Lending Bank

Lending Bank

- retains customer relationship as they continue to service their SBA loans
- sells the loan to FTN Financial at a predetermined coupon and price

Customer

 will not know that the loan has been sold into the secondary market

The Role of the Lending Bank

- Books premium received from the sale of the loan as income
 - In accordance with Generally Accepted Accounting Principles as defined in ASC 860
- Retains total (gross) coupon from the borrower on the unsold, unguaranteed portion
- Retains servicing fee on the sold portion of the loan
 - at least 1% if loan is sold at a premium

The Role of the Broker/Dealer

- Broker/Dealer purchases SBA loans in an active negotiated secondary market
- The lending bank forwards required loan transfer documentation to FTN Financial for review
- B/D forwards documentation to the registered fiscal and transfer agent for the SBA loan to be placed on a registered loan certificate
- B/D will either:
 - sell the individual loan to an investor
 - or combine the loan with other similar SBA loans into an SBA pool through the fiscal and transfer agent

The Fiscal & Transfer Agent

- Lending bank will forward, on a monthly basis, the pro-rata share of the borrower's principal and interest payments to the FTA who remits these payments to the ultimate investor
- Modification requests must be submitted to the Agency/FTA. FTA will seek holder concurrence before approving any note modification.

Recent Pricing Trends

There are several factors that contributed – in our mind in increasing importance:

- Pooling changes that narrowed the maturities of eligible collateral (SBA Rule Change)
- Excess principal distribution (SBA Rule Change)
- Increase in refinancing activity

Pooling changes that narrowed the maturities of eligible collateral

 Effective October 1, 2017, the SBA reduced the allowable difference between the shortest and longest loan in a pool

| Structure Type | Prior Allowance | 10/1 and Forward Allowance | | | |
|----------------|---|---|--|--|--|
| WAC Pools | Shortest loan maturity must be at least 76% of the longest loan | Shortest loan maturity must be at least 94% of the longest loan | | | |
| Regular Pools | Shortest loan maturity must be at least 80% of the longest loan | Shortest loan maturity must be at least 94% of the longest loan | | | |

 Effective October 1, 2018, the SBA further tightened the maturity bands from the previous 94% to 95%. This change removed another 2-3 months variability from a pool's underlying loans.

Pooling changes that narrowed the maturities of eligible collateral

- Maturities of loans and the timing of sale more critical under the new rule
- Waiting 3 months to sell a 10 year loan could mean 2-3 points in premium!

Excess principal distribution

- The SBA published a notice in the Federal Register on October 16th that impacted the way excess principal within SBA7(a) pools is paid out to investors.
- Under the new guidelines, all excess principal held in pools created between 10/1/2004 to 9/1/2017, was reallocated to the unpaid loans in that pool on a pro-rata basis, regardless of its origin.
- Has increased prepayment speeds on affected pools predominately seasoned pools.

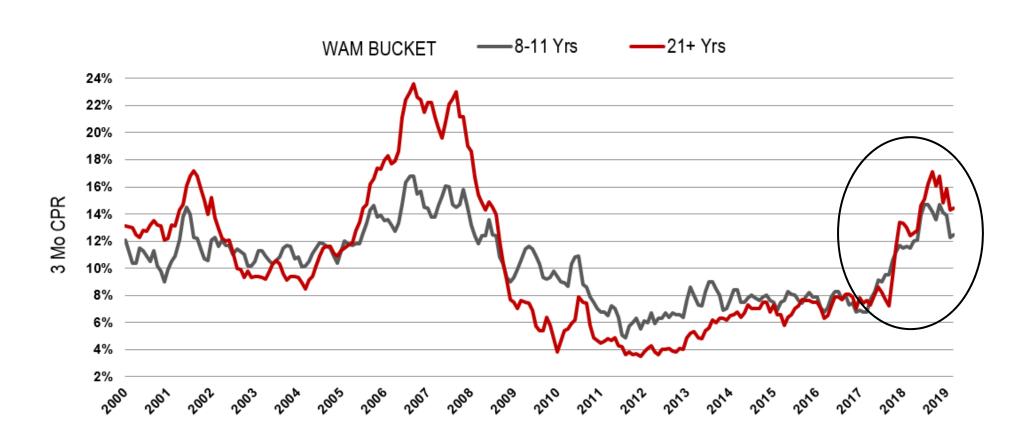

- **2008-2017**
 - Nearly 10 years of historic low speeds
 - 6-10CPR range
- Q4 2017 Q4 2018
 - Speeds trended upward driven primarily by voluntary component
- Equipment/Working Capital (2008-2018 issuance)
 - 3M CPRs = 14.1%; 6M CPRs = 15.1%
- Real Estate (2008-2018 issuance)
 - 3M CPRs = 14.8%; 6M CPRs = 17.4%

Three Month Prepayment Speeds

Higher % = Pain for Investors

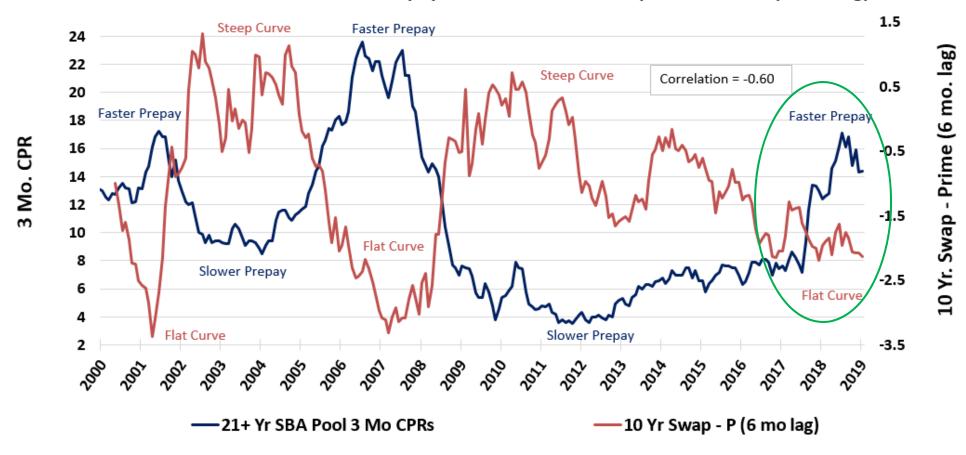

Yield Curve Shape & SBA Prepayments

Flatter = Faster, Steeper = Slower

21+ Year Real Estate Pools: Prepayments vs. 10 Year Swap Rate - Prime (6 mo. lag)

Summary of Drivers impacting pricing shift:

- The SBA rule changes that narrowed the maturities of eligible collateral
 - Long run this is a good thing but temporarily it did lead to some pricing inefficiencies as certain loans became ineligible for pooling
- Nearly all seasoned SBA loan pools have been affected by the forced distribution of excess pool principal
- Recent pick up in prepayment activity driven primarily by refinancing
 - Flattening curve, increases in prime rate & loosening credit markets creating refi incentive

YTD 2019

- Loan pricing rebounded some in the 4th quarter of 2018

 - Government shutdown significantly impacted supply in Q1 2019
- Full coupon 25yr loans trading in the \$114's
- Full coupon 10yr loans in the \$110's
- Factors that could impact loan pricing going forward
 - Investor demand for SBA securities
 - Changes to supply levels
 - Yield curve shape/prepay speeds

Par Pool Issuance

60% of 2018 & YTD 2019 pools issued with par/discount coupons

Defaults Increase in Next Cycle?

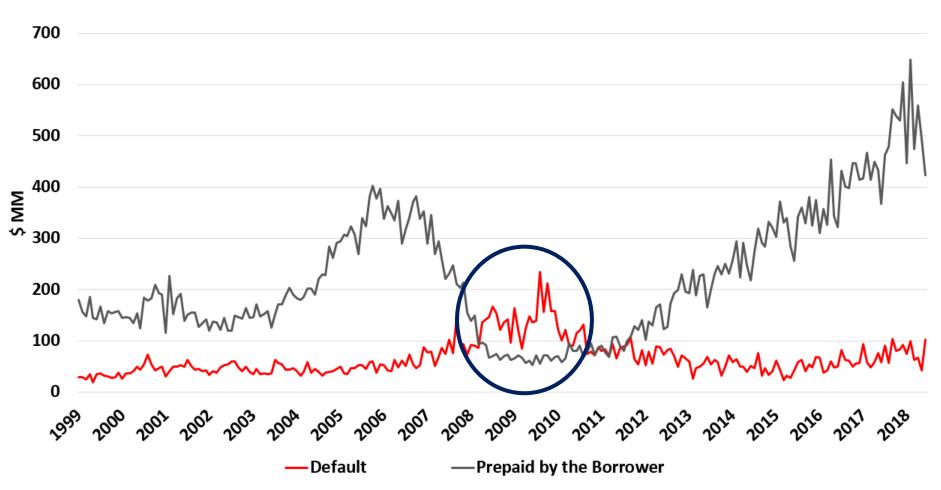

- Do we expect defaults to increase as economic activity slows? Yes.
 - No signs of that occurring yet, though there is an observed lag
 - Uptick in defaults in Feb. was related to govt shutdown & delayed action on Jan. defaults
- Defaults historically minor contributor to total prepays
- Increase in defaults typically more than offset by drop in refinancing activity
 - Economic downturn historically accompanied by steepening yield curve (removes incentive) and tightening credit (removes ability)

Defaults Increase in Next Cycle?

SBA 7(a) Loan Market: Voluntary vs. Involuntary Prepayments in Dollars

38

Hold or Sell?

- Many in the 7(a) lending community have questioned whether or not to sell into current market levels
- For those that are doing so with the anticipation that pricing will soon revert back to pre-2018 levels, we believe that there are forces at work that could prevent that from occurring
 - Permanent rule changes
 - Impact of aging!
 - Current prepayment cycle

We believe these factors driving pricing are here to stay for a while and are not transient in nature...

Per SBA regulations, if sale price exceeds \$110, seller receives only 1/2 of the amount greater than 110 with the other 1/2 paid to the SBA.

ASC 860 Gain on Sale Accounting

Gain on Sale Accounting

- ASC 860 sale of financial assets
 - Seller/Originator must carry on it's balance sheet any retained interest in the sale of a financial asset at fair market value (FMV)

Three Components in a SBA loan sale:

- 1. The guaranteed portion (portion being sold)
- 2. The unguaranteed portion (portion retained)
- 3. The servicing asset (servicing fee on sold portion)

Gain on Sale Accounting

1. Guaranteed Portion

FMV is sale price to secondary market

2. Unguaranteed Portion

- FMV is estimated by discounting expected cash flows over estimated life
 - Average life @ 12% CPR
- Discount factor determined by lending institution
- Typically valued at a slight discount (discount rate higher than borrower rate)
- Discount accreted over estimated life of loan

Gain on Sale Accounting

Servicing Asset*

- FMV is the net present value of expected servicing income stream discounted over expected life
- Discount factor is estimated yield for similar investments
- Servicing asset amortized over estimated life of the loan

^{*} Servicing retained above 1% is generally considered to be in excess of the contractual servicing rate and could create an interest-only strip which would have to be carried at FMV
